

DeliverySlip Secure Messaging

The Delivery Slip is an advanced control panel for managing secure messages, files and e-signature documents. It appears to the right of every secure message that you create or receive and gives you a robust set of features that greatly enhances the capabilities of your email program:

- Track (and prove) when a message is received, read, replied to, or forwarded
- Recall messages—even after they are read—and control whether messages can be replied to or forwarded
- Add unique passwords to specific messages so that only the intended recipient can open them for even greater security
- Easily request and provide non-repudiable e-signatures
- Easily and securely send and receive files up to 5 GB

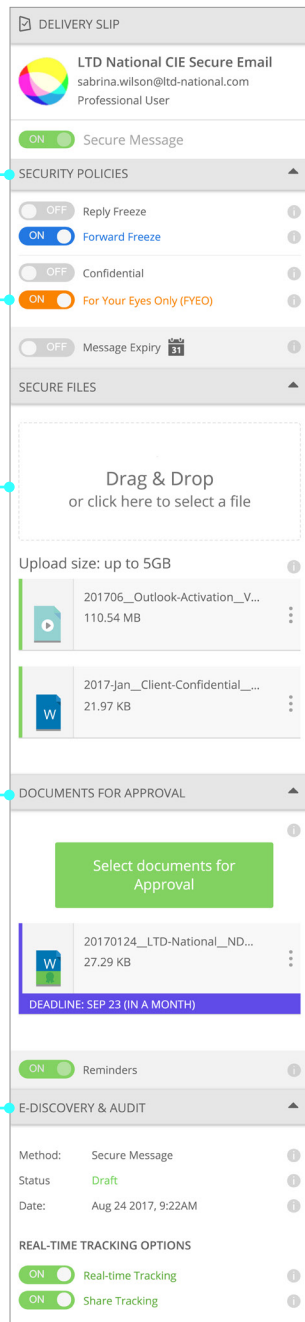

Prevent unauthorized use with unique message controls.

Password-protect messages and attachments for added security.

Securely share files up to 5 GB from any device, regardless of other limits in place.

Securely request legally binding e-signatures on documents and images.

Monitor messages in real-time and receive (and share) provable notification of delivery and open times.

View real-time message notifications and granular message tracking, including who opened the message, if it has been responded to or forwarded, and more.

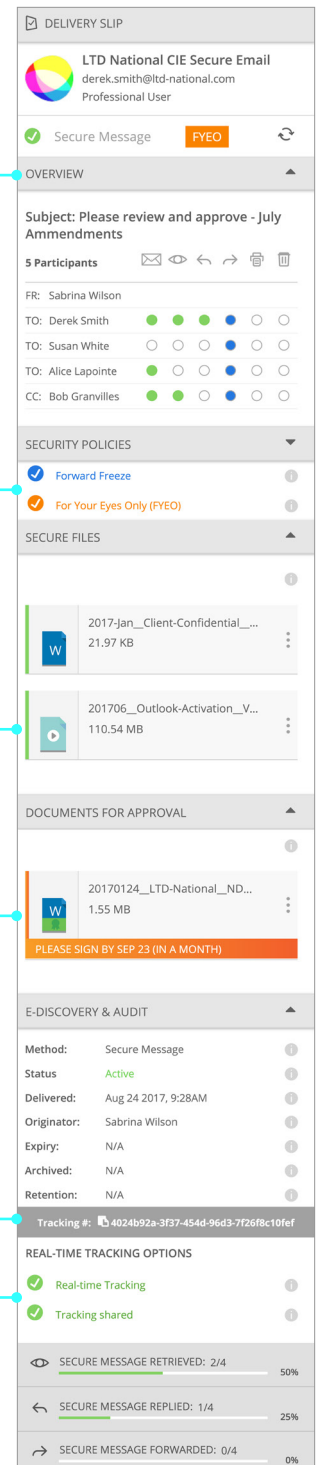

Review detailed message information, including which security policies the sender enabled.

Securely download large files regardless of any restrictions imposed by your email provider.

Provide a legal e-signature on documents right from the Delivery Slip in seconds simply by opening the file and typing your name.

Enable and simplify e-discovery, archiving and retrieval with a unique message ID on every message.

Be notified of whether the message is being monitored and if you have access to the details.
