

Still sending messages or files unsecured?

Securing your email doesn't have to be complicated. Just use DeliverySlip.

Hacking, spoofing, and ransomware, are only a few of the pitfalls facing email users today. Security, large file transfers, and electronic signatures were never envisioned initially for email. As a result, you've had to jump from bolt-on to bolt-on solution just to complete what you should have always been able to do from your inbox.

Let us introduce you to DeliverySlip, the next LTD generation of ease of use and functionality for your email.

Now you can do everything from the comfort of your inbox. We'll also add an actual delivery slip where you can control messages before and after sending, see real-time tracking, all while supporting Regulatory Compliance, Audit and E-Discovery efforts.

DeliverySlip is a cloud-based service, zero footprints for you and your enterprise. No changes needed on your end, no MX record hassle or server infrastructure to set up. Transform your email today and love your inbox again with DeliverySlip.

Secure your email with DeliverySlip

Security & community

Trust your inbox? When you're part of a secure community, you can. DeliverySlip uses bank-grade encryption to secure your messages and attachments. Recipients will be invited automatically the first time you send them a message. Since you know who you're communicating with - no phishing, malware or spam.

Large files & e-Approval / e-Signature

Do email size restrictions have you using third-party applications to share large files? Do you have yet another account to send documents for approval or signature? Sending secure links for these files with an unsecured email message? Don't use another workaround to get your work done - do it all from your inbox with DeliverySlip.

SSO & message control

Sign in and go. With SSO and DeliverySlip enabled, you'll be able to access both secure and regular messages as well as OneDrive, SharePoint and Google Drive files. You'll also be able to manage your messages before and after you send them with options like forward freeze, deadlines and reminders, and true message recall. Compose, attach, control and encrypt right from your inbox.

Mobile

Take your secure messages and files wherever you go. No need to be tied to your desktop, with DeliverySlip you're fully mobile. Access your secure messages either through your mobile browser or one of our apps for Android, iOS or Windows phones.

Discovery, audit & compliance

Protect your sensitive information and support regulatory compliance with a comprehensive, authenticated and non-repudiable audit trail. Trust that documents are authentic and unaltered. DeliverySlip adds a timestamp and assigns a unique transaction number to every message and attachment. Notifications will be sent to you every time there is an interaction with your message or attachments. Understanding the chain of custody has never been easier.

About DeliverySlip

DeliverySlip is the next generation of ease of use and functionality for email; providing encryption, electronic signatures, file sharing (up to 5GB) and advanced message control, all working seamlessly from a user's inbox. Over 5 million users patronize DeliverySlip, which is stress-tested by KPMG, hosted by Microsoft Azure and powered by 13 patents. Trust DeliverySlip to keep your communications and brand safe.
